Art Unit: 2838

1. Claims 1-17 are allowed

The reason for allowance is that the prior art of record does not teach or reasonably suggest that a power management system has a primary power source and a secondary power source generated from primary power source with a power output selector coupled to each for selecting power for a regulated power output. First, during initialization and at any other time during operation, when the primary power source exceeds the secondary power source, the primary power source is used as a power supply for the regulated power output. Second, at any time after initialization that the primary power source exceeds the regulated power output, the primary power source is used as the power supply for the regulated power output. Third, at any time after initialization that the secondary power source exceeds the primary power source and the primary power source is less than the regulated power output, the secondary power source is used as the power supply for the regulated power output.
